

## MQTT Config Information

**MQTT IP Broker:** 20.47.111.32

**PORT:** 1883

**Login:** beehub

**Password:** Test123@

**MQTT Topic:** measurement/bletest/**DEVICE\_ID**

*example: measurement/bletest/1270FEF2-08D5-49E8-8B2B-42E1B4F22188*

MQTT Message Payload: {"**samples**": "-23,67", "location": "0.0"}

MQTT Topic is related to BLE device ID. In payload, samples data is included.

## BLE Message from device

From Peripheral BLE device we need **Device\_ID** and **Samples** data (measurement data) like in example {"samples": "-23,67", "deviceId": "1270FEF2-08D5-49E8-8B2B-42E1B4F22188"}. Here in samples is temperature: -23 and humidity 67%, Device\_ID: 1270FEF2-08D5-49E8-8B2B-42E1B4F22188.

**Question:** Device ID is like BLE UUID, so maybe it can be included in UUID device not in message?
